IT SECURITY AUDIT

RANSOMWARE ATTACKS ARE GROWING MORE THAN

350%

ANNUALLY
CISCO 2018 CYBERSECURITY REPORTS

IT'S NOT JUST THE BIG GUYS BEING ATTACKED

58%

OF MALWARE ATTACK VICTIMS ARE CATEGORIZED AS SMALL BUSINESSES
Verizon 2018 DBIR

92%
OF MALWARE IS DELIVERED VIA EMAIL!
Verizon 2018 DBIR

"The threats only target large businesses to ransom"
FALSE
"They wouldn't be interested in my small operation"
FALSE

These attacks are random! Coded hack bots and algorithms scan all IP addresses and emails to find an open door.

What will you do ~~IF~~ *when* you get targeted?

365 Solutions Group can help protect you company's data from the below increasingly common attacks:

- **Phishing**: is a type of scam where cyber criminals try to gain access to your network via email or other online social networking systems to have you provide sensitive information (like username and password) to gain access to your data.
- **Malware**: is malicious software which is specifically designed to gain access to or damage a computer without the knowledge of the owner. There are several types of malware including worms and spyware, and even crypto currency mining bots.
- **Ransomware**: is a special type of malware that encrypts devices or online files to prevent people from using or even reading them unless a ransom is paid (generally in Bitcoins to make it untraceable).

Achieving the **right balance** between enabling your staff to **access** information wherever and whenever they need, yet keeping your data and systems **secure**, is at the core of what 365 Solutions Group do. Using cloud technologies means your data is always backed up and available, and Microsoft's continued investment in security ensures it stays protected.

What can be done?

Microsoft has a great tool called *Office 365 Secure Score* which **analyses your Office 365** services (e.g. OneDrive, SharePoint, and Exchange) then looks at your settings and activities, and compares them to a **security baseline** established by Microsoft. You'll get a score based on how aligned you are with best security practices. It then presents a **list of actions** and setting configurations that could improve your overall security score. It creates a list of tasks described in **IT terminology** and some recommendations could be excessive for your requirements and inconvenience your staff.

What does the 365 Solutions Group Security Audit include?

365 Solutions Group run and review your Microsoft Security Score, **interpret the jargon**-heavy output and consider your business's **specific situation** and requirements to present a series of recommended actions, in **plain business terms**. Our provided recommendations balance the impact on users' daily routines, which cyber security threats are reduced by that action, and any additional costs incurred such as extra licences.

Example:

A common recommendations is to "Review your DLP policies" which most businesses don't know how to implement. DLP stands for Data Loss Prevention and we can help identify sensitive data types, and evaluate the options that suit your specific business requirements.

Your Secure Score is:

* Memor esto itaque unde excideris: et age pœnitentiam, et prima

365 Solutions Group know which actions are **quick fixes** to improve your overall score, and which settings will add much needed protection to company data without hindering operations or compromising the user experience. We can help you navigate the options and best practices used by other organizations in your industry.

365 Solutions Group Security Audit

ONLY $1,560 EX. GST

1. We **log in** to your environment and run Microsoft Secure Score
2. We **interpret** your results into a plain English **report** with business cases and examples; then **recommend steps** that suit your unique business
3. We **enable Multi-Factor Authentication** (MFA) to protect against email hacking, and provide "How to" guides for end users and administrators

Why enable Multi-Factor Authentication? Compromised email passwords are the most common threat and are responsible for approximately 80% of cyber security breaches!

Contact us today to discuss the Security of your environment
